Southern Waxmyrtle

A small evergreen tree or shrub growing on wet or dry sites is a nitrogen fixer and will work well mixed in a variety of forest types, on open wetter areas and for mitigation projects. It provides food and cover for a variety of birds, including quail and turkey.

Price: 10 for \$15

Chickasaw Plum

A large, deciduous, multi-stemmed shrub that can grow to be 25 feet tall if trained. Usually forms a large thicket in the wild. Grows in full sun or partial sun/shade. Fruits are eaten by birds, squirrels and other mammals. Fruit is good for human consumption and is used for jellies and jams.

Price: 10 for \$15

Pawpaw

The Pawpaw is the largest edible fruit native to America and thrives on deep, fertile soil that is moist, but well drained and slightly acid. Wildlife and humans alike favor the fruit.

Price: 10 for \$15

Elderberry

A shrub that can reach a height of 13 feet at maturity. Produces a small juicy purple-black fruit used in jellies and pies. Ripe fruit eaten by many bird species, esp wild turkey. Grows in wet soils, especially in open areas near water at the forest edge.

Price: 10 for \$15

Beauty Berry

A shrub that can reach five feet at maturity. It produces a small, bright purple fruit that is readily eaten by many bird species. Requires full sun to partial shade.

Price: 10 for \$15

Silky Dogwood

Adaptable to a variety of sites, but prefers wetter soils. Excellent source of food for wildlife and is also widely used for erosion control and watershed protection. Mature height 10 feet to 15 feet.

Price: 10 for \$15

Southern Crabapple

Attractive and useful, the Southern Crabapple is found throughout the southern U.S. on moist, well-drained soils. It prefers full sun and adds to the food sources for many species of birds and mammals.

Price: 10 for \$15
